Products for
Explosion Hazardous Environment

General information on HAFNER products for explosion hazardous environment

Since July 1, 2003, devices and protective systems for use in explosion protection areas must be approved according to Directive 94/9 / EC - known as the ATEX Directive. This has been replaced by the latest ATEX 2014/34 / EU directive.

Essential when applying the ATEX directive:

- Non-electrical equipment (e.g. pneumatic actuators and valves) fall within the scope of application.
- Basic safety requirements are defined.
- The devices are divided into groups and categories, which in turn are assigned to corresponding zones. Zones are to be defined by the operator in accordance with ATEX directive 137.
- The CE mark is mandatory.
- Each device must be accompanied by an operating manual and a declaration of conformity.
- The directive also takes dust explosion protection into account.
- It applies to mining and all other potentially explosive areas

When and where can an explosion occur?

Explosions can always occur where flammable gases, liquids or dusts are produced, transported or stored. Under certain conditions, explosive mixtures arise in connection with air. In such potentially explosive areas, a small spark is often enough to trigger an explosion. Areas at risk of explosion can be found, for example, in chemical factories, refineries, tank systems, paint factories or sewage treatment plants and in other areas in which dust-forming bulk materials are processed or transported, e.g. in grain mills, feed mills and cement plants.

What are potential ignition sources?

Exemplary electrical ignition sources:	Exemplary mechanical ignition sources:	Other exemplary ignition sources:
<ul style="list-style-type: none"> • Sparking that occurs when contacts are opened • Electrical equalizing currents • Electrostatic discharge • Hot surfaces of coils 	<ul style="list-style-type: none"> • Hot surfaces caused by friction • Adiabatic compression • Sparks generated by hitting 	<ul style="list-style-type: none"> • Open fire • Overheating bearings or brakes • Self-ignition (exothermic compounds) • Lightning strike

Products subject to approval according to the ATEX directive

- Electrical equipment
- Non-electrical equipment such as:
 - Cylinders
 - Rodless cylinders
 - Valves
 - Hoses (must be antistatic)

This affects all devices that have their own potential ignition source (see above).

Products not subject to approval according to the ATEX directive

The following product examples do not have their own ignition sources and can be used in certain hazard zones in accordance with the manufacturer's instructions:

- Pneumatic accessories
- Mechanical accessories
- Air preparation units
- Fittings
- Check- and flow regulator valves

But: These devices must be protected from falling objects as well.

General information on HAFNER products for explosion hazardous environment

Overview of product groups, categories and zones according to ATEX 2014/34 / EU and ATEX 137

According to the ATEX 2014 directive, the manufacturer must assess his products and label them accordingly:

- Divide into product groups and categories for use in different zones
- Divide into temperature classes
- Divide into explosion groups
- Determination of the permissible ambient temperatures

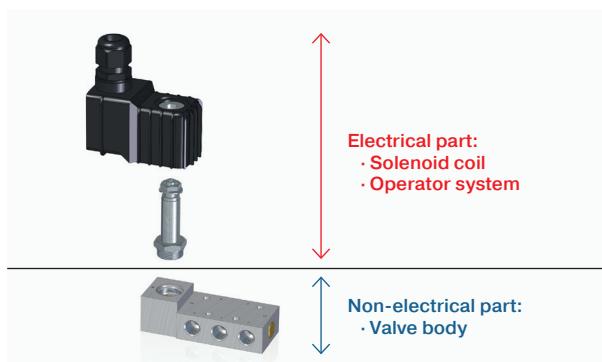

In accordance with ATEX 137, the system builder or operator must assess the system and define appropriate protective measures (e.g. in the context of an explosion protection document):

- Divide the system into zones according to the hazard potentials determined
- Determine temperature classes
- Determine explosion groups
- Determination of the occurring ambient temperatures

The plant manufacturer is responsible for ensuring that the selected components meet the requirements.

The ATEX directive differentiates between an electrical and non-electrical device.

Electrical devices are, for example, solenoid systems. Cylinders, valves and the mechanical part of the solenoid valves are considered as "non-electrical devices".

Electrical and non-electrical devices are identified using the same scheme.

1. Example identification of a non-electrical device:

	II	2G	Ex	h	IIC	T6	Gb	X
	II	2G	Ex	h	IIC	T6	Gb	X

Example identification of an electrical device:

	II	2G	Ex	e mb	IIC	T6	Gb	X
	II	2G	Ex	e mb	IIC	T6	Gb	X
Gas atmosphere								Special conditions
Dust atmosphere								Equipment protection level
								Temperature class
								Explosion group
								Ignition protection
								Ex-identification
								Equipment category / zone
								Product group

In addition, the ambient temperature in which it is permitted to be used (e.g. $-10^{\circ}\text{C} \leq \text{Ta} \leq +50^{\circ}\text{C}$) is also printed on the products.

In the case of devices that have both markings, the respective lower Ex characteristic values shall be used.

In addition, a CE mark is mandatory.

General information on HAFNER products for explosion hazardous environment

Product group:

Product group I

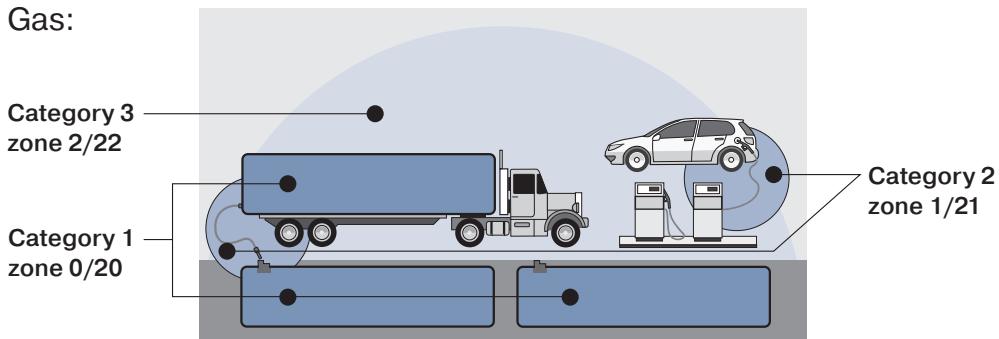

Products from product group I are distinguished between M1 and M2. Both are suitable for mining applications. They are not in our focus as HAFNER does not offer suitable equipment.

Product group II

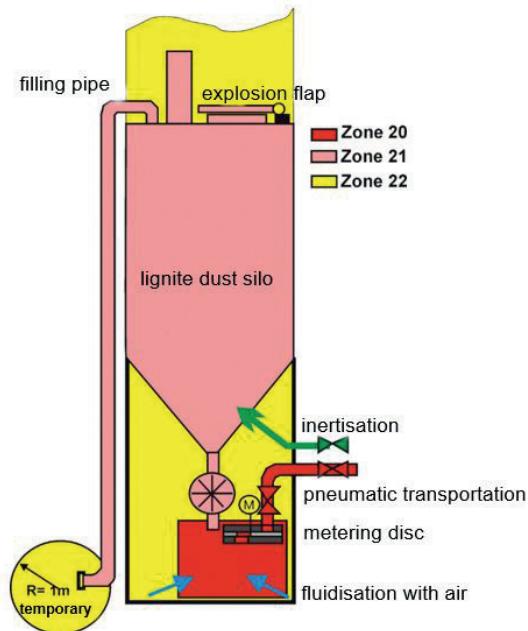

All other products for explosion hazardous environment are in this group.

Category:

Gas:

Dust:

Category I

An area in which an explosive mixture is continuously present or present for long periods >1000 hours/year.

Category II

An area in which an explosive mixture is occasionally present 10 – 1000 hours/year.

Category III

An area in which an explosive mixture is not likely to occur in normal operation and if it occurs it will exist only for a short time <10 hours/year.

General information on HAFNER products for explosion hazardous environment

	Zones for Gases	Zones for Dust
Category 1	<p>Zone O Area in which an explosion hazardous atmosphere consisting of air and inflammable gases, vapors or fog is present constantly or over a longer period of time. > 1000 hours/year</p>	<p>Zone 20 Area in which an explosion hazardous atmosphere consisting of a dust-cloud or a mix of air and dust is present constantly or over a longer period of time. > 1000 hours/year</p>
Category 2	<p>Zone 1 Area in which there is a probability that under normal conditions an explosion hazardous atmosphere consisting of air and inflammable gases, vapors or fog can be present. 10 – 1000 hours/year</p>	<p>Zone 21 Area in which there is a probability that under normal conditions an explosion hazardous atmosphere consisting of a dust-cloud or a mix of air and dust can be present. 10 – 1000 hours/year</p>
Category 3	<p>Zone 2 Area in which once and a while an explosion hazardous atmosphere consisting of air and inflammable gases, steam or vapors can be present. < 10 hours/year</p>	<p>Zone 22 Area in which once and a while an explosion hazardous atmosphere consisting of a dust-cloud or a mix of air and dust can be present. < 10 hours/year</p>

Covered by the HAFNER product range

Comparison of product category according to ISO 2014/34/EU with product category according to EN ISO 80079-36:

EN ISO 80079-36		Directive 2014/34/EU	
EPL	Group	Product group	Category
Ma	I (Mining)	I (Mining)	M1
Mb			M2
Ga	II (Gas)	II (Non-mining applications)	1G
Gb			2G
Gc			3G
Da	III (Dust)		1D
Db			2D
Dc			3D

Ignition protection (examples):

	General definition:	For HAFNER products:
c	Constructional safety	general protection for mechanical ATEX
i	Intrinsic safety	called ia for solenoids
ec	Increased safety	
mb	Encapsulation	with cable
me	Encapsulation enhanced safety	called Ex emb with junction box
d	Flameproof enclosure	with junction box
dm	Flameproof encapsulation	with junction box

General information on HAFNER products for explosion hazardous environment

Explosion group

Depending on the type of protection, explosion-protected equipment for gases, mists and vapours is divided into three explosion groups (IIA-IIIB-IIIC). The explosion group is a measure of the ignition transmission capability of gases (explosive atmosphere). The requirements on the equipment increase from IIA to IIIC. Consequently, products classified IIIC/IIIC can also be used in IIIB/IIIB and IIA/IIIA.

Gas group device	Use in gas groups	Example	Danger increases
IIA	IIA	Propane	↓
IIIB	IIA + IIB	Ethylene	
IIIC	IIA + IIB + IIIC	Hydrogen	

Temperatur classes:

Flammable gases and vapours are divided into temperature classes in accordance with their flammability. The ignition temperature is the lowest temperature of a heated surface at which the ignition of a gas/air or vapour/air mixture occurs. In other words, it is the lowest temperature value at which a hot surface can ignite the corresponding explosive atmosphere.

The maximum surface temperature of electrical equipment must always be lower than the ignition temperature of the gas/air or vapour/air mixture in which it is used.

Equipment of a higher temperature class (e.g. T6) can therefore also be used for lower temperature classes (T1-T5).

Temperature class	Temperature range of the mix (°C)	Max. surface temperature (°C)	Typical gases
T1	≥ 450°C	450°C	Methane, acetone, ammonia, methanol, propane, acetic acid, town gas, hydrogen
T2	≥ 300 - 450°C	300°C	Ethylene, acetylene
T3	≥ 200 - 300°C	200°C	Petroleum, diesel, heating oils, hydrogen sulphide
T4	≥ 135 - 200°C	135°C	Acetaldehyde, ethyl ether
T5	≥ 100 - 135°C	100°C	
T6	≥ 85 - 100°C	85°C	Carbon disulphide

Temperature classes, heating of the devices and ambient temperature

On non-electrical devices, the temperature range in which the devices can be operated must be specified. The ambient temperature range is marked by "Ta." on any HAFNER solenoid valve (example):

CE II 2 G Ex h IIIC T6 Gb
-10°C ≤ Ta ≤ +50°C

CE II 2 D Ex h IIIC T80°C
Db -10°C ≤ Ta ≤ +50°C

On electrical and non-electrical devices, the maximum surface temperature is also specified. For gas atmosphere as temperature class, for dust atmosphere as absolute temperature [° C].

The temperature specification for dust is 5 ° C below the maximum temperature of the temperature class.

CE II 2G Ex e mb IIC T6 Gb
II 2D Ex tb mb IIIC T80°C Db

General information on HAFNER products for explosion hazardous environment

If the permissible ambient temperature range is not printed on the device, you can find it in the instructions and declaration of conformity.

Please note that solenoid valves can have a different ambient temperature range and maximum surface temperature for the valve body (non-electrical part) and the solenoid system (electrical part).

The user is limited by the lower values for the ambient temperature. The highest specified maximum surface temperature represents the relevant restriction for the application.

Example: valve has T6 imprint, coil T4. Then T4 counts.

Products without an own potential source of ignition

For products without an own potential source of ignition, HAFNER issues clearance certificates. These products are not marked in terms of the ATEX directive, but an ignition risk assessment has been carried out.

HAFNER Pneumatika Kft.

HAFNER

ATEX CLEARANCE CERTIFICATE

The company **HAFNER Pneumatika Kft.** hereby declares that the products

Actuating elements:
BA 221 ... BA 225 00

Manually and mechanically actuated valves:
BH 320 401, BH 520 401, BV 311 301, BV 511 301, BR 311 301, BR 511 501

Logic elements:
VA 401, VA 304, VA 341, VA 361, ES 401, ES 304, ES 341, DR 501, DR 801, DR 101, SE 501, SE 801, SE 8101, SE 121

Hand-lever valves:
HV 311 501, HV 311 701, HV 311 801, HV 311 101, HV 311 121,
HVR 320 501, HVR 320 701, HVR 320 801, HVR 320 101, HVR 320 121,
HV 511 501, HV 511 701, HV 511 801, HV 511 101, HV 511 121,
HVR 520 501, HVR 520 701, HVR 520 801, HVR 520 101, HVR 520 121,
HV 53_ 501, HV 53_ 701, HV 53_ 801, HV 53_ 101, HV 53_ 121,
HVR 53_ 501, HVR 53_ 701, HVR 53_ 801, HVR 53_ 101

Valves with Interface according to NAMUR-Standards:
HVN 311 701, SENR 20, SENR 207, SENR 207 01, SENR 121 01, UB 701, UB 701 E, UB 701 VES, UB 701 NPT VES, UB 701 01 NPT VES,
BHN 601, BHN 601 01, BHN 601 VES, BHN 611 01, BHN 611 02, BHN 611 02 EDS, BHN 611 02 VES, BHN 601 01 VES, BHN 611 01 VES,
BHN 611 01 YES AIR, BHN 601 02, BHN 611 04 LL, BHN 611 01 ENT, BHN 601 NPT, BHN 420 701,
DRN 3 601, DRN 3 611, DRN 5 601, DRN 5 611, DRN 3 128, DRN 5 128

may not be put into service before the system in which it will be incorporated is declared to comply with the provisions of the European directive 2006/42/EC about the Safety of Machines, and with the regulations transposing it into national law.

According to the directive 2014/34/EU, Article 1 and Article 2, these products do not fall under the scope of the ATEX directive, because they are not capable of causing an explosion through their own potential sources of ignition.

So, these products are not marked in terms of the ATEX directive. An ignition risk assessment has been carried out.

If the installation regulations for devices and facilities in potentially explosive atmospheres and areas are compiled with (e.g. ISO 80079-36, EN 60079-14, EN 61241-14), the equipment can be used as following:

Group II, Category 2, Gas (II 2 G): for Zones 1, 2, in explosion group IIC.

Group II, Category 2, Dust (II 2 D): for Zones 21, 22, in explosion group IIIC.

Permitted temperature class: -10°C ≤ Ta +50°C.

Allowed ambient temperature: -10°C ≤ Ta +50°C.

Products with "TT" suffix in the type number: -50°C ≤ Ta +50°C.

Important notes:

- The installation regulations valid in the designated country of use are to be observed.
- Dust deposits are to be removed regularly.
- The installation and operation instructions provided by the manufacturer are to be considered compellingly.
- Compressed air must be produced outside of the hazardous area.
- The use of any flammable or explosive flow medium is not permitted.
- Connect conductive metal parts together for potential equalization and ground the entire system.
- If the above-mentioned products are built-in in a higher-level machine / tool / equipment, the risks of this machine / tool / equipment have to be assessed by the manufacturer of the higher-level machine / tool / equipment.

According to the directive 2014/34/EU, Article 1 and Article 2, these products do not fall under the scope of the ATEX directive. You can find a product list on page 2.15.3.

Please note that there are two different ATEX clearance certificates for products that can be used in explosion group IIC / IIIC and IIB / IIIC.

General information on HAFNER products for explosion hazardous environment

Temperature classes, heating of the devices and ambient temperature

The following product selection tree can help to determine the correct type of ignition protection. However, only ATEX products are considered here. Some of these are also certified per IECEx. See table on page 2.15.6.1. CSA/FM approved coils can be found on page 2.15.6.2.3.

Errors and omissions excepted

Non-electric valves for explosion hazardous environment

Pneumatically actuated valves and panel mounting valves series "BAS"

The following pneumatically actuated valves and panel mounting valves of the series "BAS" are available for the use in explosion hazardous environment.

Marking on valve, products for zone 2, 22

 II 3 G Ex h IIC T6 Gb
-10°C ≤ Ta ≤ +50°C

 II 3 D Ex h IIIC T80°C
Db -10°C ≤ Ta ≤ +50°C

Marking on valve, products for zone 1, 21, 2, 22

 II 2 G Ex h IIC T6 Gb
-10°C ≤ Ta ≤ +50°C

 II 2 D Ex h IIIC T80°C
Db -10°C ≤ Ta ≤ +50°C

Low temperature versions with adjusted temperature range.

Products with clearance certificate

Products which do not fall under the scope of the ATEX directive can be supplied with a clearance certificate. The prerequisite for this is that a risk assessment has been carried out by the manufacturer. According to that, the products can be used in the ATEX zones specified below.

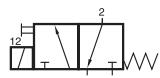

Products with clearance certificate do not carry any ATEX marking. For products which are not mentioned in the table, please contact the manufacturer.

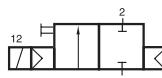

Type	ATEX zone	Explosion group Gas / Dust	Function	Port size	Further information on valve on page	Aluminum	Low Temp.	Stainl. Steel
Panel mounting valves

Please note for type MC 210: ISO-symbols have been drawn with a solenoid and manual override symbol even though the solenoid system is not included. Please consider the technical specifications of the solenoid system whether it includes a manual override or not.

CNOMO interface

Assembled product

Valves with CNOMO-interface to be used with explosion proof solenoid systems displayed on page 2.15.6.7.5.

Please consider technical specifications and restrictions stated on the datasheet of the solenoid system.

Direct acting valves type MH 311 017 24DC Ex d M and MH 311 018 24DC Ex d M include the solenoid system.

Valves with CNOMO-interface to be used with explosion proof solenoid systems displayed on page 2.15.6.7.5.
Please consider technical specifications and restrictions stated on the datasheet of the solenoid system.

Please note for low temperature valves 701...TT:
When operated below 0°C the pressure condensation point has to be at least 15°C below the temperature of environment and media. Air has to be dried!
Below -40°C the leakage-rate of the valve can increase to 10 cm³ / min. Use unlubricated air only.

Zone: 1, 2, 21, 22
Temperature class: T6

Marking on valve:

Valves with CNOMO-interface to be used with explosion proof solenoid systems displayed on page 2.15.6.7.5.

Please consider technical specifications and restrictions stated on the datasheet of the solenoid system.

Please note for low temperature valves 701...TT:
When operated below 0°C the pressure condensation point has to be at least 15°C below the temperature of environment and media. Air has to be dried!
Below -40°C the leakage-rate of the valve can increase to 10 cm³ / min. Use unlubricated air only.

Zone: 1, 2, 21, 22

Temperature class: T6

Marking on valve:

Standard temperature

Solenoid valves for explosion hazardous environment

General overview

Our customers have the choice between numerous solenoid systems of different ignition protection types.

Those can be combined with valves made from aluminum or stainless steel designed for different temperature ranges.

Solenoids are described on page 2.15.6.2.4.

Delivery contains valve with the appropriate operator system, coil, manual and declaration of conformity.

MA 36 EEx m II T4 CSA FM

CSA / FM approved encapsulated coils for gas and dust explosion-hazardous environment with 60 cm flying leads.

Voltage: Delivery on request:
12VDC, 24VDC, 110VAC,
220VAC, 240VAC

Voltage tolerance: - 10...+ 10%

Relative duty cycle: 100 %

Temperature range: -20°C ... +60°C

Protection according
to EN 60529: IP 65

Material solenoid coil: Thermoplasticpolyester

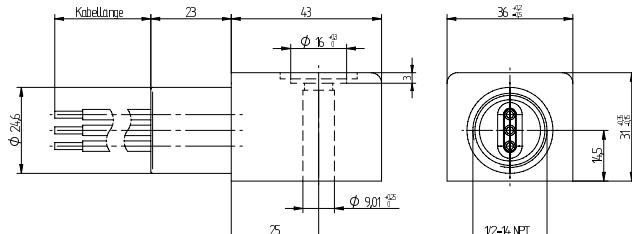

Coil rating according to
DIN VDE 0580: Class H

Conduit: 1/2" NPT

As the coil is 36 mm wide, a spacer plate called "ZPN 8" has to be used, in case of combination with our NAMUR-valve series 700. If used with NAMUR-valve series 121 a spacer plate called "ZPN 6-5" has to be used. You can find both plates on page 2.11.13.

CSA/FM approval is only valid as long as the associated components are used.

Please note:
The coil is not approved according to ATEX.

MA 36 EEx m II T4 CSA FM

Hazardous Locations:

Ex m II T4 and Division 1

Specifications in accordance to CSA certificate:

Class I, Division 1, Groups A, B, C and D; Class II, Groups E, F and G; Class III
Class I, Division 2, Groups A, B, C, D.

Specifications in accordance to FM certificate:

Explosion-proof Class I, Division 1, Groups A, B, C, D, T4, Ta = 60 °C
encapsulation/explosion-proof Class I, Zone 1, AEx m II T4, Ta = 60 °C
dust-ignition-proof for Class II/III, Division 1, Groups E, F and G, T4, Ta = 60 °C
Nonincendive Class I, Division 2, Groups A, B, C, D, T4, Ta = 60 °C
Suitable for Class II, III, Division 2, Groups E, F, G, T4, Ta = 60 °C

The current standards can be found in the certificates.

Type	Voltage	Operating press.	Power cons.	Temperature class
MA 36 EEx M II T4 CSA FM 12DC	12 V=	max. 10 bar	4,5 Watt	T4 (135° C)
MA 36 EEx M II T4 CSA FM 24DC	24 V=	max. 10 bar	4,6 Watt	T4 (135° C)

MA 36 EEx M II T4 CSA FM 220AC	220 V~	max. 10 bar	7,7 VA	T4 (135° C)
MA 36 EEx M II T4 CSA FM 240AC	240 V~	max. 10 bar	7,7 VA	T4 (135° C)

MA 22 EEx m II T4

ATEX and IEC Ex approved encapsulated coils for gas and dust explosion-hazardous environment.

The standard cable length is 3 meter, others on request.

Voltage tolerance: -10...+10 %

Relative duty cycle: 100 %

Temperature range: -20°...+50° C

Insulation class of insulating materials according to DIN VDE 0580: F

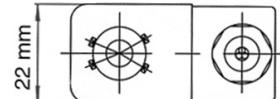

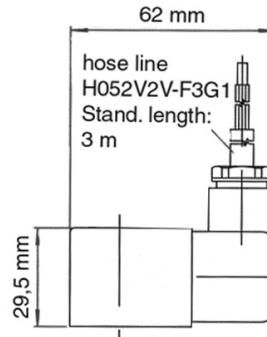

Protection with mounted plug-in connector according to IEC 529: IP 65

Moulding material: Thermoplasticpolyester

Marking on coil: II 2G Ex mb IIC T4 Gb
II 2D Ex mb tb IIIC T130°C Db

The ATEX approval is only valid as long as the associated components are used.

When this solenoid system is used in combination with „ATEX certified“ mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21 and 22.

MA 22 EEx m II T4

Type	Operating press.	Power consumption	Temperature class
MA 22 EEx M II T4 24DC	max. 10 bar	5,0 Watt	T4 (135° C)
MA 22 EEx M II T4 24AC	max. 10 bar	4,6 VA	T4 (135° C)
MA 22 EEx M II T4 110AC	max. 10 bar	4,5 VA	T4 (135° C)
MA 22 EEx M II T4 230AC	max. 10 bar	5,1 VA	T4 (135° C)

ATEX-approved valves – Ex ia – standard temperature range – aluminum

Material: Aluminum, anodized
 Zone: 1, 2, 21, 22
 Temperature range: -10°C ... +50°C
 Ignition protection type: Ex ia
 (intrinsically safe)
 Temperature class: T6

Marking on valve

CE II 2 G Ex h IIC T6 Gb
 $-10^{\circ}\text{C} \leq \text{Ta} \leq +50^{\circ}\text{C}$

CE II 2 D Ex h IIIC T80°C Db
 $-10^{\circ}\text{C} \leq \text{Ta} \leq +50^{\circ}\text{C}$

Please note:

Maximum operating pressure for valves with Ex ia solenoid system is 8 bar!

Coil is 30 mm wide!

The following solenoid valves are available:

MA 30 EEx ia tD II CT6 24DC

ATEX and IEC Ex approved intrinsic safety coil and connector for gas and dust explosion-hazardous environment. Electrical connection according to DIN EN 175301-803-A / ISO 4400.

Coil:

Electrical characteristics: 21,6... 28 V DC
 >37 mA
 final temperature rise 18 K
 275 Ohm +/-8 %

Relative duty cycle: 100 %

Temperature range: -40°... +50° C

Insulation class of insulating materials according to DIN VDE 0580: F

Protection level with connector according to EN 60529: IP 65

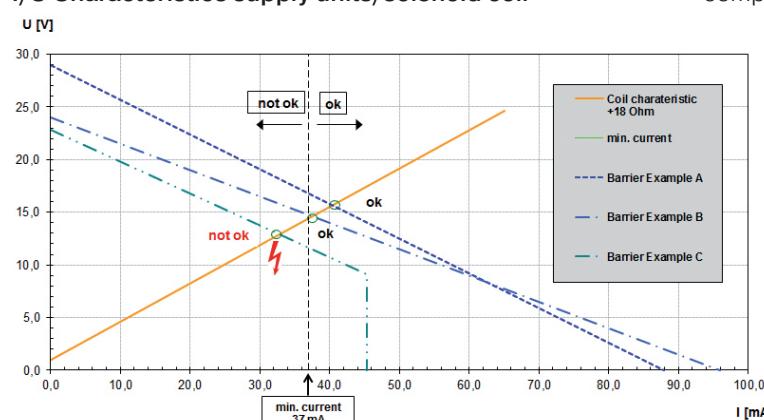

Moulding material: Thermoset resin (Epoxy)

Marking on coil: II 2G Ex ia IIB/IIC T6
 II 2D Ex tb IIIC T80°C

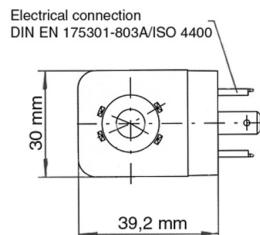

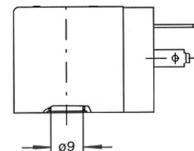

Barrier:

Electrical characteristics: 21,6... 28 V DC
 Admissible peak value: 28 V DC
 115 mA
 1,6 W

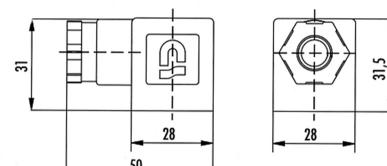

How to select a suitable barrier:
I/U Characteristics supply units/solenoid coil

When this solenoid system is used in combination with „ATEX certified“ mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21, and 22.

MA 30 EEx ia tD II CT6 24DC

ST 30 Ex ia

Order Code: MA 30 EEx ia tD II CT6 24DC

As the coil is 30 mm wide, a spacer plate called „ZPN 5“ has to be used, in case of combination with our NAMUR-valve series 700 refer to page 2.11.13.

ST 30 Ex ia is an ATEX approved connector, especially designed for being used in combination with the intrinsic safety coil. For dust approval (zone 21), this original connector is mandatory.

Delivery includes connector ST 30 Ex ia, flat nitril gasket and fixing screw (zinc-plated steel). Form according to A - ISO 4400, no LED, no varistor, operating voltage 0 – 250 V, max. current 10 A, cable diameter 6 – 8 mm.

The ATEX approval is only valid as long as the associated components are used.

ATEX-approved valves – Ex ia 0.7W – standard temperature range – aluminum

Material: Aluminum, anodized
Zone: 1, 2, 21, 22
Temperature range: -10°C ... +50°C 
Ignition protection type: 24DC Ex ia (intrinsic safety)
Temperature class: T6

Marking on valve:

 -10°C ≤ Ta ≤ +50°C
 -10°C ≤ Ta ≤ +50°C

The following solenoid valves are available:

Direct acting valves available on request.

Solenoids described on page 2.15.6.4.2.

Delivery contains valve with the appropriate coil, connector, manual and declaration of conformity.

FES 15 3/2 NC 24DC Ex ia

When this solenoid system is used in combination with „ATEX certified“ mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21, and 22.

ATEX approved intrinsic safety coil and connector for gas and dust explosion-hazardous environment.
System is also IECEx approved. Electrical connector with two pins according to form C (EN 175301-803).

Rated Characteristics:

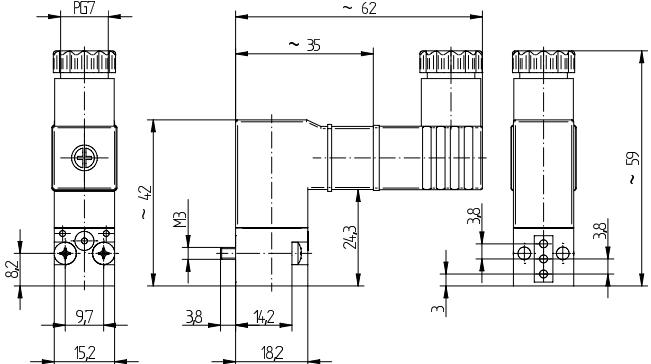

- Un: 24V
- In: 30.0 mA
- Pn: 0.72 W
- Winding resistance: 800 Ω +/- 5%

Safety Parameters:

- Ui: 26.3 V
- Li: 139 mA
- Li: negligible
- Ci: negligible

Voltage tolerance: -10...+10 %

Relative duty cycle: 100 %

FES 15 3/2 NC 24DC Ex ia

Connector included.

Temperature range: -10...+50° C

Pressure range: See valve specifications
max. 8 bar

Insulation class of insulating materials according to DIN VDE 0580: F

Protection with mounted plug-in connector according to IEC 529: IP 65

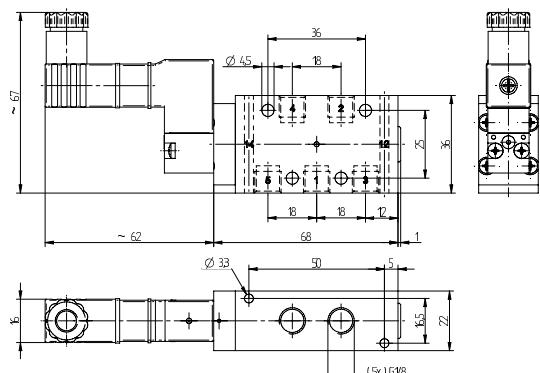

Moulding material: Glass fiber reinforced PA

Marking on coil: II 1G Ex ia IIC T6 Ga
II 1D Ex ia IIIC T85°C Da

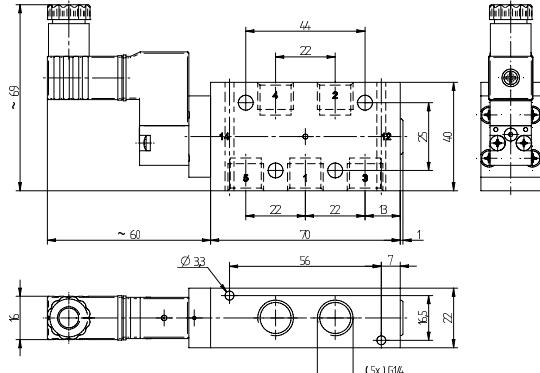

Cable diameter: 3.5 – 6.0 mm

The ATEX approval is only valid as long as the associated components are used.

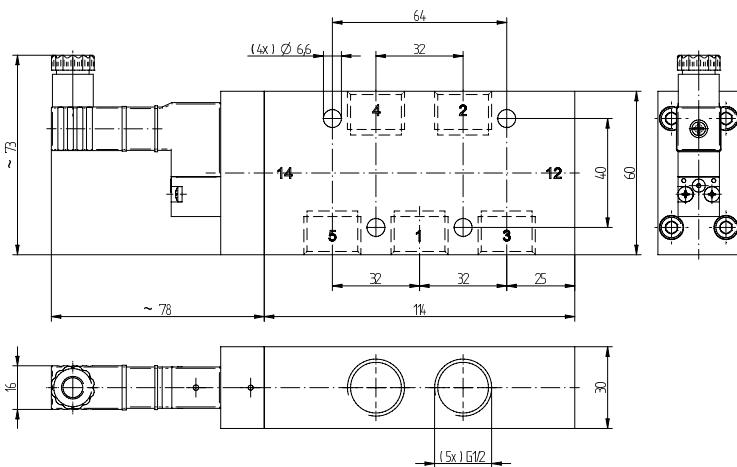

Example drawings of solenoid valves with EX ia 0.7 W solenoid system.

Solenoids are described on page 2.15.6.5.3.

Delivery contains valve with the appropriate operator system, coil, manual and declaration of conformity.

MA 22 EEx ec T5

ST 22 Ex

ATEX approved coil and connector for gas (increased safety) and dust (protection using enclosure) explosion-hazardous environment.

Coil MA 22 EEx ec T5:

Voltage tolerance: +/- 10 %

Relative duty cycle: 100 %

Temperature range: -10° ... +50° C

Insulation class of insulating materials according to DIN VDE 0580:

F

Protection with connector according to EN 60529: IP 65

Moulding material: Termoplasticpolyester

Marking on coil: II 3G Ex ec IIC T5 Gc II 3D Ex tc IIIC T95°C Dc

Delivery content without ATEX approved connector. Please order connector type ST 22 Ex separately.

Connector ST 22 Ex:

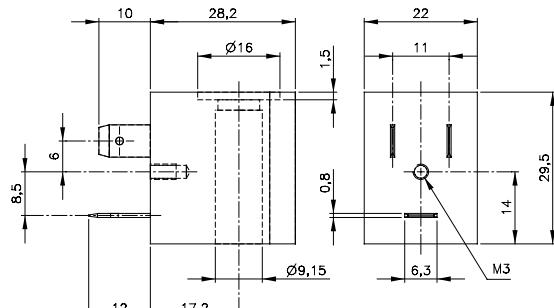

Connector can be used in combination with MA 22 EEx ec T5 coils. Connector is classified for zone 1 and 21 cat. II G/D. Please consider that our Ex ec coils are classified for zone 2 and 22 cat. III G/D only.

Using the enclosed flat seal, fastening screw and nut appropriately the system reaches protection class IP65 in accordance to IEC 60 529.

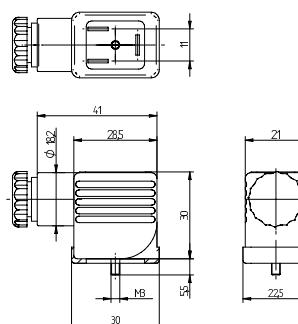

Marking on connector: II 2G Ex eb IIC T5 Gb II 2D Ex tb IIIC T100°C Db

The ATEX approval is only valid as long as the associated components are used.

When this solenoid system is used in combination with "ATEX certified" mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 2 and 22.

MA 52 EEx e mb IIC T6

Details of junction box

ATEX and IEC Ex approved encapsulated coil with junction box for gas and dust explosion-hazardous environment.

Voltage tolerance: - 10...+ 10%

Relative duty cycle: 100 %

Temperature range: -40°C...+50°C

Insulation class of insulating

Materials according to

DIN VDE 0580:

F

Protection according

to EN 60529: IP 65

(IP 67 with nut type M G1/8 M5 in combination with
exhaust protection fitting type ESR M5)

Moulding material:

Thermoplasticpolyester

Cable Gland:

M20 x 1,5
for cable diameters
6 – 13 mm

Please note:

Same coil for DC and AC.

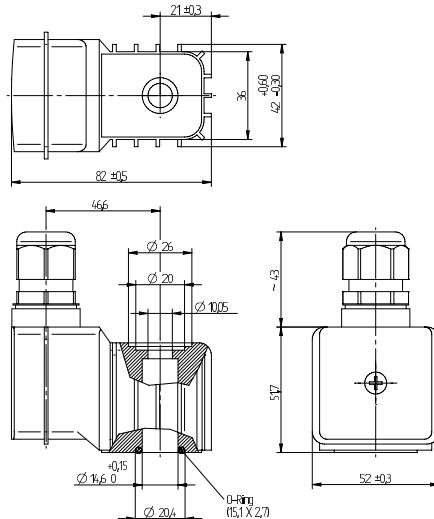

Marking on coil: II 2G Ex e mb IIC T6 Gb
II 2D Ex tb mb IIIC T80°C Db

The ATEX approval is only valid as long as the associated components are used.

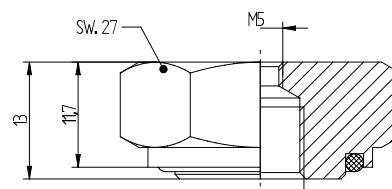

Important installation instructions:

Connecting cables and connecting lines shall be suitable for permanent application in a temperature range of -40 °C up to +105 °C and must be laid fixed to the device. The user shall provide for a strain relief. When using silicone or silicone-containing cables for connection or cables that are not resistant to scoring, these shall be protected against mechanical damage. For further instructions, please ask us for the operating manual.

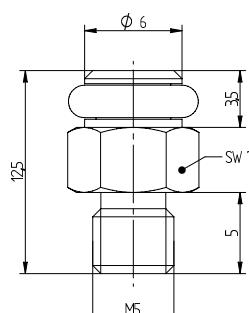

When this solenoid system is used in combination with "ATEX certified" mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21 and 22.

Base plate assembly due to width of solenoid coil (36 mm) is not possible.

Encapsulated flameproof solenoids are displayed on page 2.15.6.8.3.

A low temperature version for -20°C ... +50°C is also available on request. Please note that the system is restricted by the minimum ambiente temperature for the coil of -20°C.

Material:	Aluminum, anodized
Zone:	1, 2, 21, 22
Temperature range:	-10°C ... +50°C
Ignition protection type:	Ex dm (encapsulated-flameproof with junction box)
Temperature class:	T5
Marking on valve:	II 2 G Ex h IIC T6 Gb -10°C ≤ Ta ≤ +50°C
	II 2 D Ex h IIIC T80°C Db -10°C ≤ Ta ≤ +50°C

Delivery contains valve with appropriate operator system, coil, manual and declaration of conformity.

ATEX-approved valves – Ex dm – standard temperature range – stainless steel

The following **solenoid valves** are available:

If the coil will be used with a NAMUR-valve of series 700, an 8 mm distance plate is required. Please contact us.
Encapsulated flameproof solenoids are displayed on page 2.15.6.8.3.
A low temperature version for -20°C ... +50°C is also available on request. Please note that the system is restricted by the minimum ambiente temperature for the coil of -20°C.

Delivery contains valve with appropriate operator system, coil, manual and declaration of conformity.

MA 36 EEx dm IIC T5

ATEX approved encapsulated coil with flameproof junction box for gas and dust explosion-hazardous environment.

Voltages: 12VDC, 24VDC, 24VAC,
110VAC, 230VAC

Voltage tolerance: - 10...+ 10%

Relative duty cycle: 100 %

Temperature range: -20°C...+50°C

Ignition protection type: Coil encapsulated,
junction box flameproof

Protection with connector
according to EN 60529: IP 66

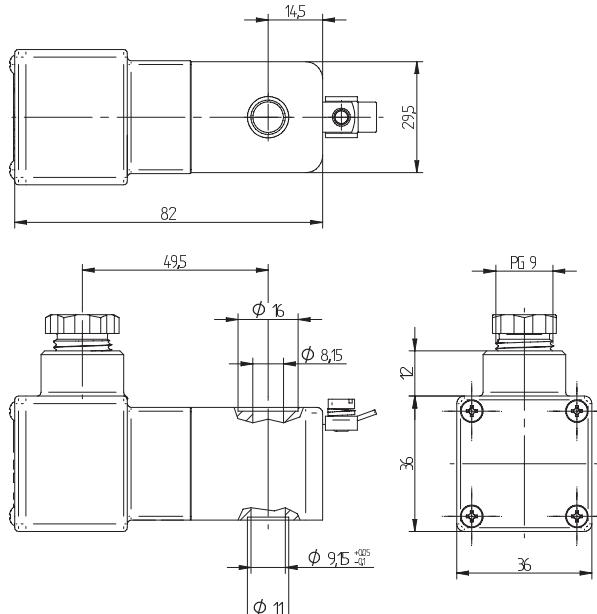

Moulding material: Thermoplasticpolyester

Coil rating according to
DIN VDE 0580: Class F

Cable Gland: PG 9 DIN 40-430
for cable diameters 6 – 8 mm

Marking on coil: II 2G Ex db mb IIC T5 Gb
II 2D Ex tb IIIC T95°C IP66 Db

When this solenoid system is used in combination with "ATEX certified" mechanical components conforming EN 13463-1:2001 and PrEN 13463-5:2000, the entire valve can be used in explosive hazardous environment zone 1, 2, 21 and 22.

MA 36 EEx dm IIC T5

As the coil is 36 mm wide, a spacer plate called "ZPN 8" has to be used, in case of combination with our NAMUR-valve series 700. If used with NAMUR-valve series 121 a spacer plate called "ZPN 6-5" has to be used. You can find both plates on page 2.11.13.

The ATEX approval is only valid as long as the associated components are used.

Type	Operating press.	Power cons.	Temperature class
